Dieser Kurs beinhaltet 8 Seminareinheiten, davon MÜSSEN 7 absolviert werden Bitte sende - nachdem Du zugelassen wurdest - ein Motivationsschreiben, das ca. 1/2 - 1 ganze Seite lang sein sollte, an Dr. Sergueï Spetschinsky · contact@spetschinsky.com

Abstract

Used skilfully, AI can offer immense leverage to a young researcher: it has the ability to multiply quality, speed of execution, and ambition of most of their work. Expert at AI, a PhD student with a 20-euro subscription can now mobilise resources which, up to very recently, were only accessible to a full professor or a lab director. Yet, AI doesn’t just impact productivity. It also has the potential of making research exciting and pleasurable in completely new ways. With the right system, academic writing can start feeling like the work of a chief editor — responsible for ideas, strategy and the oversight of a team of junior writers — but also, of a poet — focusing on style, voice and meaning for the high-quality segments that matter most.

Over 16 hours, this workshop is a hands-on, deep dive into AI system design, aiming at making you a competent academic writer with AI. Its goal is your autonomy. You do not just learn to use AI tools: you learn to build and maintain your very own academic writing assistant, tailored to your specific style,voice, objectives and ways of working. The workshop is geared towards practical experience, rather than abstract learning. It is also built around horizontal collaboration.

Besides helping you for research, it is meant to equip you for

Rundown

1. System prompts and projects.
2. Writing in your own style.
3. Writing by speaking.
4. Context curation.
5. Thinking partner.
6. Specialised personas.
7. Research integrity and data safety.
8. Open session.

This outline is deliberately open. What each session holds will be shaped by what the group brings to it. We will use Claude (20-euro subscription required) as well as a speech-to-text dictation tool.

Eight sessions of two hours, live online, Wednesday mornings 9:30 to 11:30.

10, 17 and 24 February. 3, 10, 17 and 24 March. 7 April 2027. No session on 31 March.

The course will be held in English but questions and discussions are also welcome in German. The system you build is tuned to the language you write in, whichever that is.

Applying

The workshop is limited to 12 participants, and the ones who get the most out of it use their system on their own writing between the sessions. Applicants should send in a motivation letter (in German or English), which *must* have been written with AI, and which includes a brief presentation of:

- themselves and their research, what language they mostly write in, and their greatest challenge with PhD work and writing;
- their AI skills, what they use AI for and what they find most useful or most frustrating about it (no prior AI knowledge is necessary);
- how motivated they are, and how available time-wise, over the 8-week run (in case of over-subscription, this is the deciding factor for selection.)
